Hello.

I live in a rural area where good radio is 200 miles away in Salt Lake City, UT. The signal comes in pretty good but it isn't as reliable or clear as XM. I am glad to pay for this service which connects me with the rest of the country. The modern technology that makes this possible is a good thing and shouldn't be suppressed. I am all for XM radio and it's programming including the weather service which I check before I travel.

Thank you,
Jim
